

Relics of the Burrow's cave and the myth of unicorn deer: "HU.EEM.HUL"

P. Fejes (Szeged, Hungary)

Since about 1995 there had been more than 250 papers published in the MES Newsletters and ME Journals which had dealt with the archaeological finds of the Burrow's cave. As far as I know, only one author, H. Friedrich, had published a paper in the cited journal [1], mentioning a capable German epigraphist, K. Schildmann, who, as stated, had transliterated, and with the help of the Sanskrit language, also translated the ancient text(s) of one (or more) Burrow's cave object(s). According to Friedrich, Schildmann arrived to the conclusion: "...our western civilisation is 5000 years old".

K. Schildmann told (almost) the truth, because the most ancient objects of the cave carry hieroglyphic texts and also scripts written by the North Indian linear signs (briefly: NILS), whose language is very close to the (HASS.HAN.HUSS.HAG.EEGEER.REED.EE.DEE >) Sanskrit language, but by a "few" ten-thousand years older. It is EEM.EESSAL = EEM.HUL (and I don't want to please the Editor of MES, Mr. J. J. White), or even "Earth Mother Sacred Language", which is "SSEEGEE.LI.MAGAR". Its latest presence in the ENOS age (40 000 - 36 000 BC) is well documented in the 2004 January issue of the National Geographic Magazine [2]. B. Chatwin, the British explorer - writer, thought, he had found the origins of the unicorn myth on a cave painting in Patagonia, in a rare species of Patagonian deer, called by the indigenous Indians as: "HU.EEM.HUL". I think, this kind of deer was so rare, that not a single piece of that ever existed, because HU.EEM.HUL = "HUS.I.SSEEGEE.LI.MAGAR", or in English: "seat of the heroic MAGAR people". Actually, they were the migrating fugitives of the EESSA-exodus, reaching "finis terrae", the outermost end of Earth (to my opinion closer to the upper value of the previous ENOS interval).

The extraordinary (!) value of archaeological finds of the Burrow's cave is expressed not in grams, or kilograms of gold, or by the number of precious stones found there, but by the scripts on the objects of which the oldest are originating from the ADAM epoch (just a few hundred years earlier than 44 000 BC), and the "youngest" from the collapse of the DRAVIDA-empire (I have checked the texts!) in North-India which occurred in about 1800 BC. In other words, the Burrow's cave-system seems to have been inhabited (without interruption) over about 42 000 years! (Those who had dwelt there, or other caves had saved their lives in two cataclysmic events hit the Earth in about 32 000 and 8500 BC).

I have been "punished" a few times for my "very ancient words" and "improbable assumptions of mankind's history", but, in spite of this I am very grateful, indeed, that the ME Society had never suppressed my unorthodox views.

Now, I would like to prove, within the limited volume available in MES Newsletters, that my previous statements are valid!

Fig. 1. is the picture of a Burrow's cave object. (I have taken it from [3], Fig. 23.). The woman's head is resembling to that of a dog and she keeps two symbolic objects in her hand. That, in the right hand - to my big surprise - is the Egyptian life symbol: "HAN.HA" (= EEG.EEN.EEM.EEN. EESSA.HAR) > "AN.H". The letter "T" + ring is a NILS text, with the reading: SSEE.MAGAR.EEG.HA = "MAGAR house (of the late) HAR.I.I.BAD".

However, the meaning of the previous life symbol contains two characteristic time-determining notions: "EEM.EEN.EESS", and another: "EESSA.(HAR)" (where EESSA = "snow"). The time corresponding to the ESSA-exodus (regarding how far in the past it had occurred!) is very accurate: 44 600 ± 100 BC. Even when EEM.EEN.EESS is a notion resembling to the name of the founder of the 1. Egyptian dynasty: MENES, this is not his name. It is a dynastic time-determinant, equivalent to the biblical name: ADAM (48 000 - 44 000 BC). The next one on the biblical scale is: SSEET (44 000 - 40 000), and on the dynastic scale: EEM.EEN.EEG; the third biblical notion is: EEN.HUSS (> ENOS), corresponding to: 40 000 - 36 000 BC, and the same on the dynastic scale: EEM.EEN.HUSS and so on.

Beside the strange-looking woman, on Fig. 2., we see the Egyptian (actually, the name of the country was: HA.WEERU.HUM.HA) king MENES, who keeps the same life symbol: HAN.HA (and what is at least so important) in his right hand. (The same symbol in the left hand means something else). (Later, we don't know when, he became "goddess" HATHOR; had got two horns + a disk between the horns. [It is certain, that the disk was not a "sun"-disk]). However regrettable, I cannot explain here, how can a king become a "goddess", but, believe me, he can!

The distance between the two places: Egypt and (maybe) the US state Illinois, is about 13 000 km!

Fig. 1.

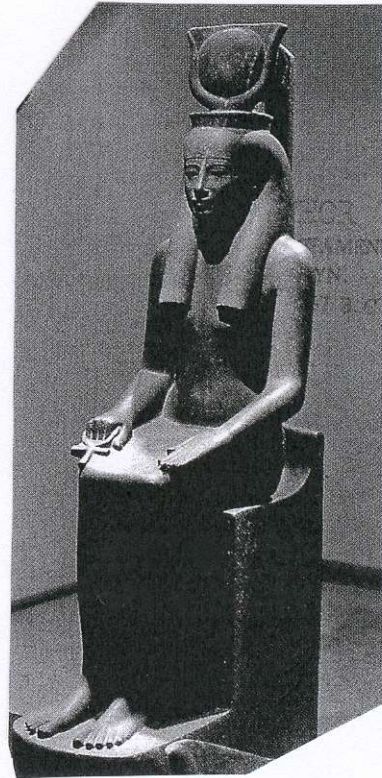

Fig. 2

To be short: the dates of the founding of the Egyptian dynasties (due to the SSEET priest: Maneton; about 309 BC) are wildly wrong before the 11. or 12. dynasties ! They don't express time, but some sort of activity of the respective persons. (In order to get this information, the numbers have to be expressed by words, one after the other).

The 2. dynasty had been founded by "EEGEE.BU.HUR.EE.EEN > "KEPHREN" (shortly after 44 000 BC). The "king" and "vezir" (i.e. "leader") of the 3. dynasty was DEE.HUSS.EER > DJOSER (after 40 000 BC) in the biblical ENOS-, or dynastic "EEM.EEN.HUSS" age. He was a real hero because within the frame of a military action, called "SEESS.HAMEE", he was able to recapture the lost "motherland" in North India and to oust his enemies to the territory of present-day Afghanistan. This heroic deed had been rendered immortal [indeed!] by a war-memorial: SSEEB.EEN.MAGAR. EEDEEN = SSEEB.EEN.EEGEES > SPHINX which we know as "SFINX". (The head of the lion is that of DJOSER!). The founder of the 4. dynasty was "EEM.EEGEER.EEN.HUSS" > "MIKERINOS".

Each founder of the dynasties from 1. to 4. had the privilege to let be built a "home of dead" (called "BEERAMEESS") in EEGEES.HA (= "house of the snow") > GIZA.

"KHEOPS", the "builder" of the first pyramid, is just another name of MENES ! (To have several names was (?) an excellent means to avoid the consequences of malediction).

From all these follows that not only the building-times of the pyramids are wildly wrong, but this is valid for all of the megaliths of the world, from the Sumerian ZIGGURAT-s, over the STON.HEN.GEE in South-England, to the Mexican pyramid-graves.

The necessary conclusions to be drawn from these facts are up to the readers of this publication.
